# Intapp Integrate

Intapp Integrate provides a simple, straightforward way to create and manage data communications across a variety of software systems. It allows organizations to streamline IT data architecture, implement master data management initiatives and automate a broad variety of critical business processes.

Enabling organizations to rapidly address common challenges including new matter intake, user provisioning and distribution list management, Intapp offers pre-built templates, best practices and access to an energetic, collaborative user community.

Intapp Integrate makes executing a broad range of IT projects quick and easy. It's been called the "no brainer" alternative to custom coding. (It's also been called: "the magic box," "a homework machine" and "my vacation" by IT managers.)

Process Automation

Critical business processes depend on the quick and accurate movement of data, documents and other assets among software applications. Today, firms are using Intapp Integrate to streamline and automate processes including:

- New Business Intake
- Lawyer & User Provisioning
- Distribution List Management
- BPM / Workflow
- Reporting & Notifications

- Workspace Creation
- CRM Management
- Cost Imports

IT Architecture

Many organizations struggle with the complexities and data quality challenges brought on by the continuing introduction of new software applications. Creating a simplified IT architecture based on the principles of centralized, master data management can deliver significant benefits. The approach enables effective response to challenges including:

- Master Data Management
- Firm Mergers
- HR System Rollouts
- Practice Management System Rollouts

Application Enhancement

Firms often struggle with the functional limits of packaged applications or cloud services. These may include restricted APIs, limited customization capabilities or lack of native connectors for existing business systems and processes. Intapp Integrate provides a way to rapidly enhance a number of standard applications, including accounting, portal and CRM systems. Intapp Integrate has been used to enhance the functionality of applications including:

- Elite 3E
- Chrome River
- NetDocuments
- SharePoint
- Workday
- Aderant
- MOJ Portals
- Dun & Bradstreet
- InterAction
- eBillingHub

The Intapp Advantage

Intapp understands legal IT and focuses specifically on the challenges facing law firms. Intapp Integrate enables organizations to address their specific operational objectives quickly, without the cost, complexity and time required by custom development. And as the industry standard for integration, the product has been tailored to work with standard legal applications.

Flexibility, Without Custom Coding

Intapp integrates with a broad variety of applications and supports multiple data communication standards. Intapp also offers pre-built templates so that firms can quickly execute projects — all without custom development or coding. The product provides direct access to templates for systems including:

- Active Directory
- Aderant
- Carpe Diem
- Chrome River
- DTE
- Elite 3E
- Exchange
- FileSurf

- HR Pro
- iManage
- Interaction
- LegalKEY
- NetDocuments
- NuView MyHRIS
- PeopleSoft
- PowerShell
- ProLaw
- Recommind
- SharePoint
- SQL Server
- StarLaw
- Workday

Solutions Delivered With Speed and Ease

Intapp Integrate is not simply an IT project; it is a platform that can accelerate and enhance almost any IT initiative. In practice, teams find that projects that have been delayed or shelved due to resource constraints or complexity, become possible once the product has been added to the equation. (In practice, many Intapp customers adopt Intapp Integrate with a single project in mind, then find the capability of the product delivers significant additional value.)

"We considered another software option for business intake from a vendor claiming to provide seamless, native integration with our firm's systems. But on closer examination, we discovered that significant custom integrations would still need to be built during project implementation. Rather than go down a path that would have added significant complexity, time and risk to our project, we opted for the architecturally cleaner, quicker and more cost-effective approach provided by Intapp Integrate."

IT MANAGER, RUSSELL KENNEDY
