# Total Time Management for firms of all sizes

Intapp Time represents the ultimate alignment of Intapp's market-leading software solutions with today's progressive thinking around time recording. Over 400 organizations, ranging in size from firms with fewer than 50 lawyers to firms with more than 4,000 lawyers, have selected Intapp as their preferred vendor for time management.

Total Time Management moves beyond the traditional relationship between time and billing, looking to a new 'input, output, outcomes' approach to help firms extract greater business value from their time data and to better understand the costs of service delivery.

One seamless system

Intapp Time delivers all the functionality with none of the complexity. Instead of discrete, separate components for entry and capture, desktop and mobile, there is one universal interface to access, online or offline, on devices and desktops. Intapp integrates with all leading practice management and accounting systems, with a single window view overlaying the bi-directional flow of time, matter/project and client data.

Choice of delivery platform

Intapp Time can be rolled out on premises or alternatively hosted within a private cloud environment, bringing enterprise software and the proven benefits of Software as a Service to firms of all sizes. Intapp is the enabler of Total Time Management for everyone, a single unified solution that's accessible, affordable and available anytime, anywhere, any way.

User-centric

Intapp Time has been designed to be everyone's perfect 'partner in time'. We've drawn on all our collective experience and poured that into a flexible, adaptive solution that timekeepers can use any way they want, where it's a style mandated at firm level or defined by the preferences of individual timekeepers.

Device agnostic

Intapp offers an exceptional user experience across iOS, Android, Windows Phone and Blackberry, ensuring Intapp Time goes where you go, and is available wherever you need it to be, from your desktop to your laptop to your smart device.

Fast, flexible interface

Intapp Time provides a responsive, configurable interface that lets timekeepers see, manage and record activity in the way that works best for them. A familiar, Outlook-like planner offers daily, weekly and monthly work views, while integrated dashboards display entries by client or matter/engagement and other metrics. A host of slick utilities further simplify the mechanics of time recording.
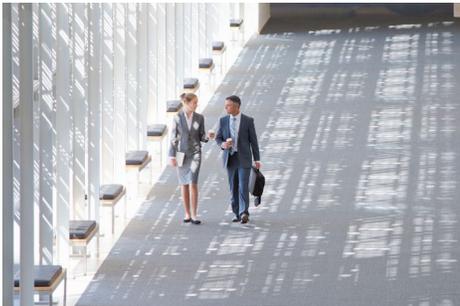

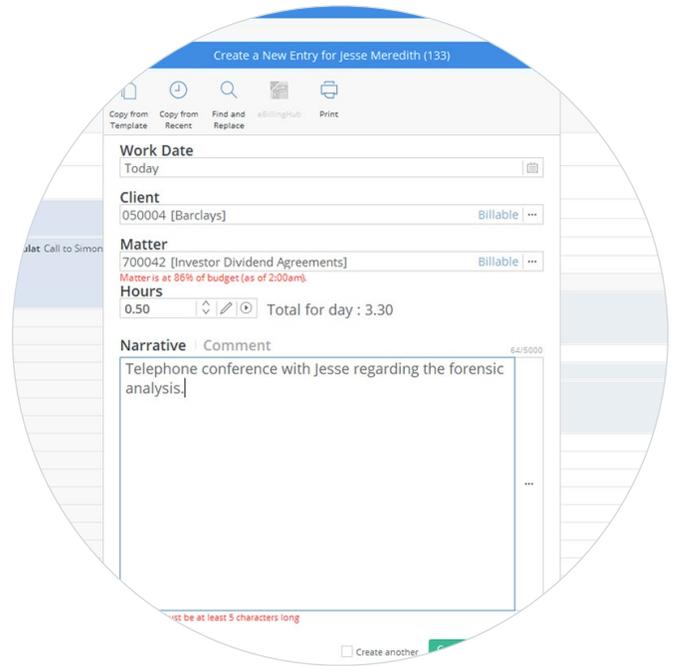

Comprehensive compliance capability

Intapp Time provides point-of-entry compliance with billing guidelines and outside counsel guidelines, giving timekeepers instant feedback that allows them to correct errors on the spot, as well as enforcement of information barriers and phase/task activity code requirements.

Higher quality data

Intapp Time provides timekeepers with an accurate, consolidated report of their client and matter/engagement related activity, generated by the automatic background monitoring of the key applications in use. This can deliver an additional 2-4 hours of billable time each month to a fee earner, while also building a much more accurate, complete time data set.

Business influencer

As the enabler of Total Time Management, Intapp Time is helping drive better project management, pricing innovation, costing accuracy, client relationships, fee earner support, labor optimization, situational awareness, and ultimately greater business control.

"Lawyers shouldn't have to spend a lot of time on administrative tasks. We wanted to reduce the time and effort lawyers spend reconstructing their activity, and help them capture a more accurate record of client work as it happens. Intapp Time will help to achieve this while adapting to the way lawyers work. The flexibility, the ease of use, and the strong mobile solution were important criteria in selecting Intapp Time over other alternatives."
